Advanced Tools 3.0 Release Notes for VisualWorks Non-Commercial

This document outlines the changes made in the 3.0 release of Advanced Tools, an add-on component of VisualWorks Non-Commercial 3.0. It is not intended to be a comprehensive explanation of new features and functionality nor is it intended to be used in lieu of the product documentation. Refer to the *Advanced Tools User's Guide* specifically and the VisualWorks documentation set in general for more information.

New Features/Functions

There are no new features or functionality in this release of Advanced Tools. Rather, this is an architectural release, transitioning the delivery mechanism from fileins to parcels. Refer to the *VisualWorks Non-Commercial 3.0 Release Notes* for an overview of changes in the base VisualWorks product and in the product suite.

Discontinued Features/Functions

The following are discontinued effective with this release:

- The Terminal Emulator is no longer included in Advanced Tools.
- The Project Browser is no longer included in Advanced Tools.

Of Special Interest

- Source files are distributed as a standard part of this release. Sources for parcels are in .pst files, and are treated as .sou files were previously.

- There is a new exceptions system with this release of VisualWorks. Refer to the "Changes to Exception Handling" section in the *VisualWorks Application Developer's Guide*.
